SECURITY MANAGER

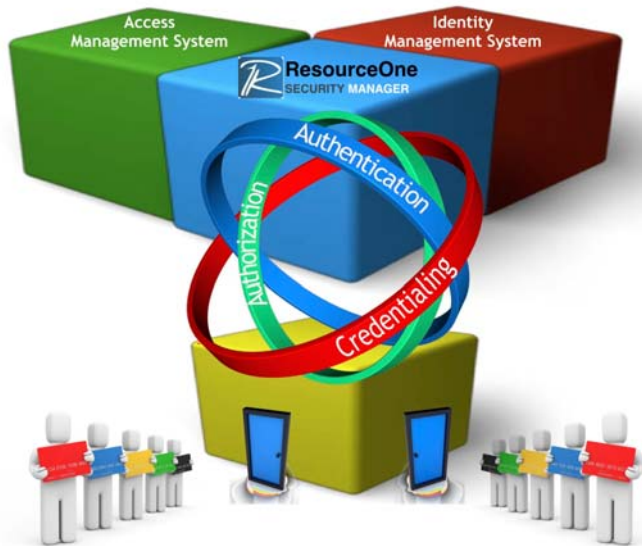

Integrated physical identity and facility access management for improved physical security, compliance, and efficiency across the enterprise.

Security Manager

Resource One Security Manager (R1SM) integrates physical identity and facility access management delivering real-time and fail-safe credentialing, authorization and authentication improving physical security, compliance, and efficiency across the enterprise.

For organizations tasked with ensuring facility security and the safety of large, dynamic communities of employees, vendors, clients and visitors, Resources One Security Manager integrates physical identity and facility access management to efficiently provision and manage individual access rights and group policies in real-time.

By taking advantage of the convergence of physical security and information technologies, R1SM automates credentialing, authorization and authentication workflow to eliminate time-lags and errors, reduce costs, and ensure compliance by integrating HR, IT, Facilities, Compliance and Security through a centralized data repository and unified management console.

Operational Benefits

- *Automated workflow for on-and-off-boarding to reduce security breaches, and improve employee safety*
- *Policy-based, role-driven provisioning of access rights to reduce errors and time lags*
- *Centralized data repository to improve compliance, log analysis and auditability*
- *Centralized management console supports cross-departmental needs requiring minimal training*
- *Standardized and customizable reporting for situational analysis and predictive behavior*
- *Flexible middleware conduit to support unique business processes and requirements*

About Resource One

With over two decades of experience delivering IT solutions, including unified physical security, Resource One helps clients take an integrative approach to physical security. Its veteran staff of security and IT experts are uniquely suited to drive innovation through the IP-enablement of traditional security platforms converged with today's IT principals of open standards, interoperability and customization. The result is uniquely crafted physical security solutions for clients with a breadth of requirements, including large commercial enterprises, health care institutions, education, retail, government, entertainment venues, and more.

R1SM Key Features

R1SM Management Console

- Web-based user interface
- Standard and custom reporting
- Imports associate data from Identity Management system
- Role-based security layer
- Rules engine for automatic role assignment
- Exception system allows for custom provisioning
- Activity Monitor to track all changes, events, notifications, approvals and more

R1SM Associate Management

- Identity Management system data updated in real-time
- Tracks changes to associates
- Automatically picks up new jobs, departments and locations
- Flags important changes for review
- Automatically pulls photos from Physical Security system
- Provides multiple role assignments to Associates

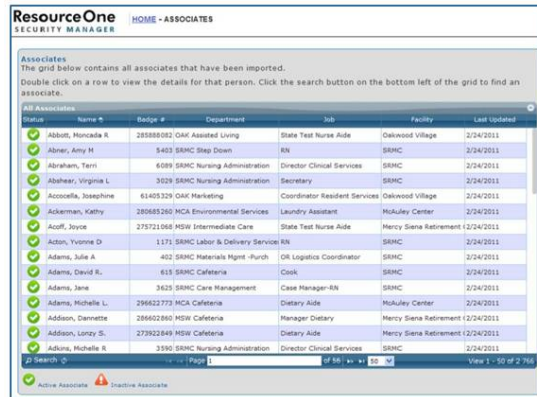

R1SM Rules Algorithm

- Maps physical security levels into logical groups
- Correlates departments, jobs and locations to roles
- Assigns roles to individual or groups of associates

Specifications

- Microsoft Windows .NET Framework
- Application Programming Interface (API) compatibility with all major Identity Management and Physical Security systems
- User interface supports Microsoft IE, Firefox, Safari and Chrome browsers
- Supports compliance for NERC/CIP, CFATS, HIPAA and FISMA regulations
